

From a square to a blooming flower

By Yossi Nir

My model “From a square to a blooming flower” has a sequence of folding that starts with a preliminary base to get a reference point. By flipping the paper over the paper can be collapsed to the water bomb base. By folding the tip of the triangle, we get the square for doing one of the two sinks. Right after this the blinz base is done. The following steps will include the second sink which makes the 4 petals. The final steps will give the flower the blooming look and the folder can adjust the level of blooming.
